Quiet Vandal-Pac

Dri-Prime® Pumps

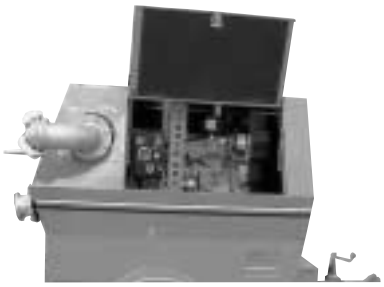

Municipal Pump Station Bypass

6" (150mm)
Dri-Prime Pump

If equipment security is a concern, the Quiet Vandal-Pac enclosure is the right choice. The Quiet Vandal-Pac houses the Godwin Dri-Prime pump in a specially designed enclosure that mounts directly to the trailer and allows pumping to continue while at the same time providing equipment protection and keeping engine and other noise to a minimum.

Completely surrounding the pump unit, the enclosure consists of 14 gauge sheet metal lined with a 1" (25mm) layer of polydamp acoustical sound deadening material. Three, hinged, lockable doors provide convenient access to operating controls and service locations while keeping out unauthorized personnel. A silenced muffler (cowl muffler) and silenced priming exhaust further reduce operating noise. The Quiet Vandal-Pac option is available for any Godwin pump model that can be mounted on a 60 gallon (227 liter) trailer. Sound levels are approximately 72 dBA at 30 feet (9M).

Hinged, lockable doors provide access to operating controls and service locations.
